

PRESS RELEASE

15 NOVEMBER 2022

Snowpack

French cybersecurity startup Snowpack secures more than 2 million euros funding.

The funds will be used to further develop and deploy worldwide the first Invisibility Network Overlay, or SNO (Snowpack Network Overlay). SNO hides users, data, servers, and devices, and makes them totally anonymous and secure. Even Snowpack cannot see anything on SNO.

Snowpack is a 2022 I-Lab and French Cyber Acceleration Strategy (2 different projects) laureate. Snowpack also received funding from Bpifrance, Arion.vc, Itera Invest (early investor in French tech & BtoB startups), EIT Digital (co-funded by the European Union), Defense Angels and other Business Angels.

This funding will be used in the coming years to:

- 1/. Develop and integrate novel and disruptive features;
- 2/. Further expand and densify SNO v1.0 worldwide;
- 3/. Strengthen the sales and marketing team;
- 4/. Integrate our invisibility layer into our partners' products and services;
- 5/. Make Snowpack an international startup.

Paris, 15th of November 2022 – Created in May 2021, Snowpack develops a new patented cybersecurity technology to make users, data, servers, and devices invisible on Internet. A spin-off from CEA, the French largest applied research center, Snowpack is based on the Plateau de Saclay, south of Paris, and employs 10 people. More information is available on <https://snowpack.eu/>.
